World **VITILIGO** Day 25 June 2018

Understand **VITILIGO** : *UNDERSTAND COLORS OF LIFE*

- Vitiligo is a white patch on skin.
- Vitiligo occurs due to changes in interaction of immune cells and color producing cells in a person.
- Vitiligo is not related to any infection, allergies or food deficiencies.
- Vitiligo is not contagious.
- Vitiligo is not leprosy.
- Vitiligo affects only the external appearance of a person.
- Vitiligo will not affect person's physical or mental abilities.
- Vitiligo is not hereditary in majority of cases.

Vitiligo can be treated effectively by regular and long term treatment.

- Vitiligo affected persons can benefit by interacting with other persons affected with vitiligo through various self help groups working at local and state level.
- Vitiligo affected individuals have been successful in various fields of life.

Let's pledge to come together and fight VITILIGO !

- Avoid any kind of discrimination of vitiligo affected individual.
- Avoid teasing school mates, colleagues having vitiligo.
- Encourage vitiligo affected individuals for taking proper treatment or joining self help groups for vitiligo.
